

## IN THE CLAIMS

Claims 1, 17, 21, 25, 30 and 33 are amended.

Claims 20, 29 (First and Second instances) and 34-35 are cancelled.

New claim 36 has been added.

1. **(Currently Amended)** A computer-implemented method for processing video data comprising:

determining an ideal playback timing associated with the video data, the ideal playback timing determined at least in part by way of information encoded in the video data; and

if an actual playback timing of the video data lags the ideal playback timing, the lag resulting from a limited processing power of the computer implementing the method, varying a frame rate associated with the video data using a smoothing function to recover toward the ideal playback timing.

2. **(Original)** The computer-implemented method as recited in Claim 1, wherein smoothly varying the frame rate includes controlling the frame rate using a frame-dropping algorithm that drops frames in the video data in accordance with the smoothing function.

1           **3. (Original)** The computer-implemented method as recited in  
2 Claim 2, wherein controlling the frame rate includes:

3           computing a delay by comparing the actual playback timing with the ideal  
4 playback timing; and

5           if the delay exceeds a threshold value, determining that the actual playback  
6 timing lags the ideal playback timing.

7  
8           **4. (Original)** The computer-implemented method as recited in  
9 Claim 3, wherein the threshold value accounts for ordinary system variations.

10  
11           **5. (Original)** The computer-implemented method as recited in  
12 Claim 3, wherein the delay is computed by subtracting the ideal playback timing  
13 from the actual playback timing.

14  
15           **6. (Original)** The computer-implemented method as recited in  
16 Claim 3, wherein the smoothing function incorporates the delay as a variable.

17  
18           **7. (Original)** The computer-implemented method as recited in  
19 Claim 3, wherein the delay is computed as an average delay that includes an  
20 average of the delay associated with a current frame of the video data and at least a  
21 delay associated with a previous frame.

22  
23           **8. (Original)** The computer-implemented method as recited in  
24 Claim 7, wherein the average delay is an average of delays associated with the  
25 current frame and a plurality of previous frames.

1           **9. (Original)** The computer-implemented method as recited in  
2 Claim 2, wherein the frame-dropping algorithm includes a rasterization algorithm.

3  
4           **10. (Original)** The computer-implemented method as recited in  
5 Claim 2, wherein the frame-dropping algorithm includes if a current frame is a B-  
6 frame, dropping the current frame.

7  
8           **11. (Original)** The computer-implemented method as recited in  
9 Claim 2, wherein the frame-dropping algorithm includes if a current frame is an I-  
10 frame, showing the current frame without further determination.

11  
12           **12. (Original)** The computer-implemented method as recited in  
13 Claim 2, wherein the frame-dropping algorithm includes if a current frame is a P-  
14 frame, processing the current frame to obtain enough information for processing  
15 subsequent frames before dropping the current frame.

16  
17           **13. (Original)** The computer-implemented method as recited in  
18 Claim 2, wherein the frame-dropping algorithm includes if the actual playback  
19 timing does not lag the ideal playback timing, overriding any determination to  
20 drop frames.

21  
22           **14. (Original)** The computer-implemented method as recited in  
23 Claim 1, wherein the ideal playback timing is determined from a presentation  
24 clock.  
25

1           **15. (Original)** The computer-implemented method as recited in  
2 Claim 14, wherein the presentation clock includes a filter configured to remove  
3 noise.

4  
5           **16. (Original)** One or more computer-readable memories containing  
6 a computer program that is executable by a processor to perform the computer-  
7 implemented method recited in Claim 1.

8  
9           **17. (Currently Amended)** A computer-implemented method for  
10 managing video data frame rates comprising:

11           determining delays associated with playback of frames of video data;

12           calculating an average delay from averaging the delays;

13           determining an ideal frame rate associated with the frames;

14           calculating a frame skip factor; and

15           varying the frame rates associated with the playback by applying a frame-  
16 dropping algorithm configured to determine whether to drop a current frame using  
17 the frame skip factor, wherein the frame-dropping algorithm includes:

18           if the frame skip factor is greater than the ideal frame rate, adding  
19           the ideal frame rate to an iterator; and

20           if the iterator is greater than or equal to the frame skip factor,  
21           subtracting the frame skip factor from the iterator and showing the current  
22           frame.

1           **18. (Original)** The computer-implemented method as recited in  
2 Claim 17, wherein the frame skip factor is calculated with a tolerance factor that  
3 accounts for variability in a system timer.

4  
5           **19. (Original)** The computer-implemented method as recited in  
6 Claim 17, wherein the frame-dropping algorithm includes an iterative algorithm  
7 that varies the frame rates using a smoothing function that includes the frame skip  
8 factor.

9  
10           **20. (Cancelled).**

11  
12           **21. (Currently Amended)** The computer-implemented method as  
13 recited in Claim 20 17, wherein the frame-dropping algorithm includes if the  
14 iterator is less than the frame skip factor, dropping the current frame.

15  
16           **22. (Original)** The computer-implemented method as recited in  
17 Claim 21, wherein the frame-dropping algorithm includes:

18           if the iterator is less than the frame skip factor, determining whether the  
19 average delay has reached a significant percentage of a maximum delay; and  
20           if so, showing the next I-frame subsequent to the current frame.

21  
22           **23. (Original)** The computer-implemented method as recited in  
23 Claim 17, wherein priority is given to the execution of the computer-implemented  
24 method to improve the quality associated with the calculated frame rates.  
25

1           **24. (Original)** One or more computer-readable memories containing  
2 a computer program that is executable by a processor to perform the method  
3 recited in Claim 17.

4  
5           **25. (Currently Amended)** An apparatus comprising:  
6 means for determining an ideal playback timing associated with the video  
7 data; and  
8 means for varying a frame rate associated with the video data using a  
9 smoothing function to recover toward the ideal playback timing;  
10 means for computing a delay by comparing an actual playback timing with  
11 the ideal playback timing, the actual playback timing lagging the ideal playback  
12 timing as a result of a limited processing capability of the apparatus; and  
13 means for incorporating the delay into the smoothing function.  
14

15           **26. (Original)** The apparatus as recited in Claim 25, further  
16 comprising means for controlling the frame rate using a frame-dropping algorithm  
17 that drops frames in the video data in accordance with a smoothing function.

18  
19           **27. (Original)** The apparatus as recited in Claim 26, further  
20 comprising means for buffering the video data so that the frame-dropping  
21 algorithm is executing ahead of real time.

22  
23           **28. (Original)** The apparatus as recited in Claim 26, further  
24 comprising means for incorporating a rasterization algorithm into the frame-  
25 dropping algorithm.

1           **29. (First Instance) (Cancelled).**

2  
3           **29. (Second Instance) (Cancelled).**

4  
5           **30. (Currently Amended)**   One or more computer-readable media  
6 having stored thereon a computer program that, when executed by one or more  
7 processors, causes the one or more processors to:

8               determine an ideal playback timing associated with video data; and

9               if an actual playback timing of the video data lags the ideal playback  
10 timing, vary a frame rate associated with the video data using a smoothing  
11 function to recover toward the ideal playback timing, wherein the lag results from  
12 an inherently limited processing capability of a system processing the video data.

13  
14           **31. (Original)**   One or more computer-readable media as recited in  
15 Claim 30, wherein the frame rate is smoothly varied by applying a frame-dropping  
16 algorithm that drops frames in the video data in accordance with the smoothing  
17 function.

1           **32. (Original)** One or more computer-readable media as recited in  
2 Claim 31, wherein the frame-dropping algorithm includes:

3           computing an average delay by averaging delays associated with frames in  
4 the video data, and  
5           incorporating the average delay into the smoothing function.

6  
7           **33. (Currently Amended)** An electronic device comprising:  
8 a memory; and

9 a processor coupled to the memory, the processor being configured to  
10           determine an ideal playback timing associated with video data; and  
11           if an actual playback timing of the video data lags the ideal playback  
12 timing, vary a frame rate associated with the video data using a smoothing  
13 function to recover toward the ideal playback timing[[]], the lag resulting  
14 from an inherently limited processing capability of the electronic device, and  
15 wherein the processor is further configured to:

16           compute an average delay by averaging delays associated  
17 with frames in the video data and incorporate the average delay into  
18 the smoothing function; and

19           apply a frame-dropping algorithm that drops frames in the  
20 video data in accordance with the smoothing function.

21  
22           **34-35. (Cancelled).**  
23  
24  
25

1           **36. (New)**       The apparatus as recited in Claim 25, further  
2 comprising:

3           means for computing an average delay associated with playback of a  
4 plurality of frames; and

5           means for incorporating the average delay into the smoothing function.
